

Warehouse Operations Standard Operating Procedure

SYNTHETIC DEMO DOCUMENT — AI Supply Chain Copilot Portfolio Project

Document ID	SOP-WH-004
Owner	Warehouse Operations
Version	1.0
Effective Date	2026-07-01

1. Scope

This SOP describes receiving, inventory-control, replenishment, and exception-handling practices for warehouses represented in the AI Supply Chain Copilot demonstration.

2. Receiving

Inbound shipments are checked against expected purchase-order and shipment information. Quantity discrepancies, visible damage, missing documentation, and late arrivals are recorded as exceptions for follow-up.

3. Inventory Accuracy

Warehouse teams maintain inventory accuracy through transaction discipline, cycle counting, and investigation of material discrepancies. High-impact discrepancies should be communicated to inventory planning before replenishment decisions are changed.

4. Shortage Escalation

When a shortage threatens fulfillment, the warehouse should notify inventory planning and supply chain operations. Teams should evaluate available inventory at alternate locations, inbound shipment status, and feasible transfer or expedite options.
